Thanks to all coaches who sent results. Your efforts were essential toward making our lists more nearly complete. We don't pretend either our 1989 or All-Time lists are complete or without error. We know they are not. Still, we are pleased with this first production. If you note any errors or omissions of any kind, please let us know. We will make corrections and amendments in our 1990 edition.

Thanks, too, for your support. We would like to encourage you to freely copy and distribute the order form found on the back cover of this book. We have a good number of 1989 annuals on hand, and each order received will add to the zeal with which we begin our work in 1990.

Manual Timing vs Fully Automatic Timing

Rule 3-8, Article 5:unless the timing system is fully automatic, times registered in one one-hundredth of a second must be rounded off to the next tenth of a second. (Example: 10.42 will be recorded as 10.5 unless fully automatic electronic timing is used.)

Rule 3-8, Article 8: When fully automatic timing is used, time will be recorded in one-hundredths (1/100) of a second.

In ranking performances on our lists, we added 0.24 seconds to manual times to approximate the fully automatic time equivalent. For example, a hand time of 11.0 seconds would be equivalent to a fully automatic time of 11.24 seconds.

Metric Distances vs English Distances

The All-Time Minnesota lists mix performances at metric and English distances. The actual performance is listed. If the performance was at an English distance (yards or miles), the metric equivalent follows in parentheses.

The conversion factor for 220y/200m, 440y/400m, 880y,800m, one mile/1600m, and two miles/3200m is always 0.9942. That is, multiply the English performance by 0.9942 to get the metric equivalent.
